Improve Productivity & Efficiency with AnswerHub's Microsoft Teams Integration!

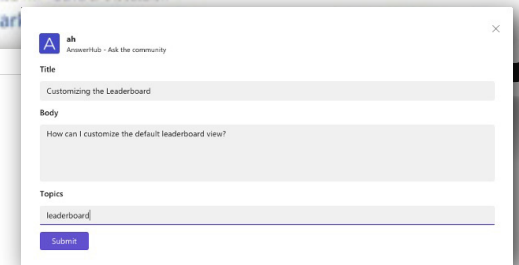

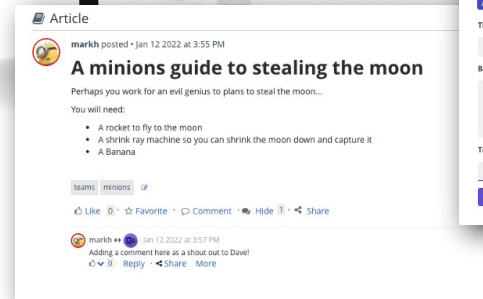

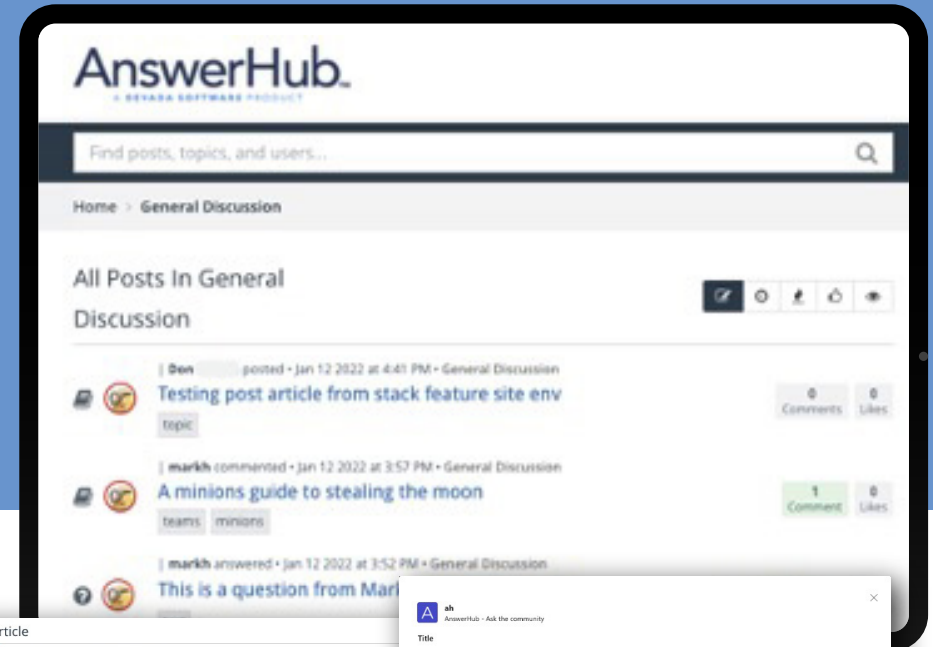

Microsoft Teams

Your team uses Microsoft Teams every day - Why not make it easier to find answers to questions that are asked across the enterprise?

- Reduce distractions, repeated questions, and corporate drag to make Microsoft Teams more efficient
- Improve productivity and eliminate tool switching
- Find answers to questions posted in Microsoft Teams more efficiently using AnswerHub
- Get notified instantly when new questions & answers are available

Improve your Microsoft Teams experience with AnswerHub's NEW Two-Way Integration

Tap into your collective company knowledge from within Microsoft Teams without wasting time sifting through unrelated threads or pulling a team member away from their work. AnswerHub's integration with Microsoft Teams empowers team members to find information without leaving their current workstreams, which means more productivity and more tribal knowledge being shared.

How Does It Work:

Ask questions directly in Microsoft Teams

AnswerHub fits directly into your existing Microsoft Teams workflow. Reduce context and tool switching by using /ah ask to ask a question directly in Microsoft Teams and have it appear in AnswerHub. The question will have a Microsoft Teams badge in AnswerHub to show where it originated, and can be filtered by the Source Origin as well for reporting purposes.

Receive Notifications in Microsoft Teams

Increase knowledge sharing by receiving instant, customizable Microsoft Teams notifications for the following activities: Questions, Answers, Comments, and Mentions.

Easily Connect Your Microsoft Teams workspace with AnswerHub

Using our Messaging Integration Framework, seamlessly connect your Microsoft Teams workspace with AnswerHub and map your channels into your spaces within AnswerHub.

Why Companies Use AnswerHub in Conjunction with Microsoft Teams:

Intelligent Search

Tags and keywords allow team members to quickly and easily find relevant answers to their questions. The ability to search by Source Origin also allows team members to search for questions that were initially asked in either Microsoft Teams or AnswerHub.

Up-to-the-minute information

Answers have prominent timestamps which are easily updatable, so team members can trust that the answers they find are the most up to date and accurate.

Integrated workflows

AnswerHub provides a single source of knowledge that feeds into developers' existing workflows, such as Microsoft Teams. Developers can spend more time developing and less time searching multiple tools for an answer.
